

The AI Teacher Assistant

Telo combines AI-driven language immersion and speaking interaction to reinforce classroom-based ESL instruction in K-12 schools.

In a typical classroom, 25 students share 45 minutes, each speaks for less than one minute, and teachers lack clear student-level progress visibility, making personalization at scale impossible.

Why Telo for ESL?

- **Not another screen:** Unlike tablet apps, Telo is physical. Students speak to a robot, increasing participation and focus.
- **No additional staffing required:** Deliver personalized support without hiring more assistants.
- **Structured 1:1 speaking practice:** Every learner gets the chance to practice speaking daily, something impossible in large classes.
- **Clear, actionable insights:** Teachers receive clear, data-driven reports on vocabulary growth, accuracy, engagement and personalized AI insights.

Approved in **950 US K12 Districts**

Live in **5 US schools**

Telo

The AI Teacher Assistant

How Telo Works

- **Students speak directly with Telo:** Short, structured conversations aligned with classroom instruction.
- **Telo listens and adapts in real time:** Encourages longer responses and adjusts to each student's level.
- **Telo remembers each learner:** Recalls each student's interests, preferred topics, and challenges, making every interaction personalized.
- **Telo includes a teacher friendly dashboard** which delivers instant personalized AI insights, from vocabulary growth to engagement time.
